

**IN THE SPECIFICATION**

Kindly replace the first paragraph following the title on page 1 with the following:

This application is a continuation of Int'l Appln. No. PCT/GB97/03222, filed November 25, 1997.

Page 9, replace the heading starting on line 16 with the following:

**Table 1.** Class I-restricted influenza epitopes recognized by freshly isolated CD8+ effector T cells (SEQ ID NOS:1-5)

Page 11, replace the third paragraph starting on line 12 with the following:

For ESAT-6, sequences congruent with the peptide motifs HLA-A2, -B8 and -B52 were identified; these peptides were synthesized and are displayed in Table 2 (SEQ ID NOS:6-12). No sequences congruent with HLA-B7, -B35 and -B53 were present in ESAT-6 and thus no peptides were synthesized for these HLA class I alleles. Peptides were sorted into pools that were used for *in vitro* restimulation of donor PBMC. Peptides were found to be CD8+ epitopes are shown in boldface. Similarly, 42 peptides were synthesized based on the sequences of antigens 85A and 85C. No CD8+ epitopes were identified amongst these and the peptides are not shown.

**IN THE SEQUENCE LISTING**

Kindly enter the attached Sequence Listing.

The paper and computer readable forms of the Sequence Listing do not add new matter, and their contents are the same. It is respectfully submitted that the attached complies with 37 CFR § 1.821 et seq. Otherwise, prompt notice of any defects in the Sequence Listing is earnestly solicited and additional time is requested to comply.
